

I believe the proposal presented in RM-10806 benefits the interests of the Amateur Radio Service and for the effective and efficient use of limited available HF spectrum. Therefore, I support it. My only reservations are that it could go further in ensuring the effective use of amateur radio service spectrum and in promoting the use of CW as the most efficient spectrum utilization mode. I would add, for example, the concept of a low-CW-speed band segment where novices could acquire skill before joining the community of more skilled, higher-speed operators.

Sincerely,

James Knight, W2JLK
